Premium High Gloss, Wet Look Shine

For Outdoor or Indoor Use

Superior Protection for:

- Exposed Aggregate
- Stamped Concrete
- Brick Pavers
- Brushed Concrete
- Natural Stone
- Artificial Stone
- Concrete Blocks

Water Based Technology

Prevents premature aging and strengthens the top layer

ducan Concrete Driveway & Patio Sealer or Glaze is a transparent, low odor and eco-friendly water based sealing system that protects the natural beauty of aggregate, pavers, stamped concrete, brick and other stone or concrete surfaces.

The **Concrete Driveway Sealer** brings out the natural beauty, leaving a beautiful satin, low lustre finish.

The **Premium High Gloss Patio Glaze** deeply enriches, darkens and enhances the colour of the surface just like solvent sealers, leaving a supreme wet look shine. Apply either the Concrete Sealer or Premium Glaze to driveways, sidewalks or patios. The sealers can also be used indoors on brick/stone fireplaces or for dust-proofing basement or warehouse floors.

Resists Staining

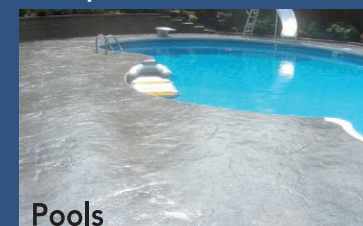

Our superior water based technology protects concrete from oil, transmission fluid, de-ice salt and caustic and acidic chemicals. These enemies can cause premature breakdown and staining of the surface. ducan Concrete Sealer and Premium Glaze resists the attack from these harsh materials, which helps the concrete last longer.

Resists the Elements

Depending on the surface, the ducan Sealer system will penetrate up to an inch. The resin fills the air pockets, strengthening the top layer. This retains the new look longer and helps prevent premature aging of the surface caused by the elements like rain, snow, ice and ultra violet rays.
